

# California Student Technology Showcase

*Highlighting curriculum-based student technology projects from grade K-12*

<http://showcase.k12hsn.org>

## Student Technology Showcase

Highlighting the exemplary work of students has been the goal of the California Department of Education (CDE) since it began the Student Technology Showcase in 2001. The CTAP (California Technology Assistance Program) regional offices coordinate the submission of applications from students and teachers and ensure that each includes the California content standards that are advanced in the project. Submissions are solicited and evaluated by CTAP staff in order to showcase them at the Student Technology Showcase, held at the Computer-Using Educators (CUE) conference in March of each year.

When presented at the conference, participating students have the opportunity to demonstrate their work in the areas of Web, video, multimedia, graphic art, sensor/probe data and analysis, animation, and database development. The Showcase offers new ideas on how integrating technology into the curriculum serves to heighten student engagement.

As a joint effort of CDE, CTAP and CUE, the Student Technology Showcase serves to inform parents, teachers, administrators, legislators and higher education representatives about curriculum-based student technology projects being undertaken in Kindergarten through grade 12.

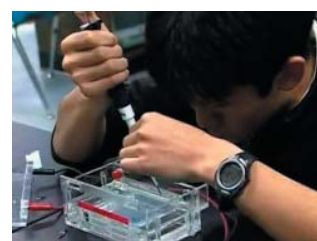

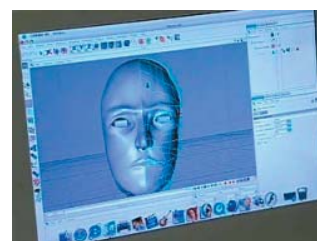

This event is open to the community at no charge. More than 2,000 people attended the 2006 Showcase held in Palm Springs. By offering its resources to the existing efforts of CDE, CTAP and CUE, the K-12 High-Speed Network (K12HSN) extends the Student Technology Showcase opportunity to include students and teachers who are unable to travel to the CUE conference.
